

Llandaff Fields, Pontcanna, Cardiff

The Grade II listed historic parkland of Llandaff Fields, situated in the heart of Cardiff, features many striking tree lined avenues of lime and horse chestnut trees. The river Taff winds through the park as does the Taff Trail cycle route that runs from Holyhead to the Brecon Beacons through Cardiff. LeesonBound resin system was chosen for its aesthetic appearance, strength and longevity to be installed along the pathways giving pedestrianised access from Llandaff to Cardiff city centre.

The properties of the LeesonBound resin system are ideal to cope with the harsh winters of rain, snow and ice. As the product is porous, all water is absorbed into the ground meaning no pooling to turn to ice when the temperature dips below freezing. The anti-slip character of the stone layer brings great traction, assists with grip and provides a safe surface for walkers and cyclists whatever the weather.

Project Key Facts

Product: LeesonBound PU4844

Aggregate: Autumn Gold 3mm

Area: 2000m²

Date: April 2013
