

Indoor Swimming Pool

A spa in the Midlands was looking for a surface for surrounding the indoor pool area that was, safe, porous and attractive. LeesonBound fitted the brief perfectly whilst also being seamless and low maintenance. The resin is chlorine resistant so it won't break up the aggregate and can be used with a wide range of blends for an attractive finish. The porous properties of the system allows for surface water to be absorbed so there's no pooling, and the anti-slip coating reduces the number of accidents. A resin bound surface provides a good alternative to concrete or tiles and can easily incorporate a design.

Project Key Facts

Product: LeesonBound PU4844

Aggregate: Autumn Gold

Area: 120m²

Date: August 2011
